-

PROJECTS

Student Management System using Java & SQL Workbench

May 2024 - June 2024

Developed a Student Management System using Java and SQL Workbench, with features for student registration, course management, and grade tracking. Included role-specific functionalities for admins, lecturers, and students to manage users, courses, and academic records efficiently.

Clothing Retailer E-Commerce Website using WordPress

May 2024 - June 2024

Created an e-commerce website for a clothing retailer using WordPress with custom web design, enabling online product listings, shopping cart functionality, and secure transactions.

Student Management System using SQL

Oct 2023 - Nov 2023

Developed a DBMS for a Student Management System using SQL, handling data operations including data entry, updates, deletions, and retrieval to manage student information effectively.

Learning Management System using C language

May 2023 - June 2023

Created a Learning Management System using C language, with features for course management, user roles, and academic tracking.
